SOMETHING ABOUT ME

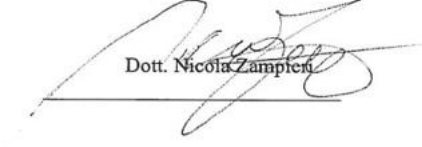

My time management skills are excellent and I'm organized, efficient, and take pride in excelling at my work. When I'm working on a project, I don't want just to meet deadlines. Rather, I prefer to complete the project/research well ahead of schedule. Stress is very important to me. With stress, I do the best possible job.

The appropriate way to deal with stress is to make sure I have the correct balance between good stress and bad stress. I need good stress to stay motivated and productive. From a personal perspective, I manage stress by playing piano and guitar and by sport activity: I play each sports I can, especially winter sports and sport with team. In winter season I worked as rescue man, as a doctor, in high mountains. It's challenging individually, and I have to communicate and work closely with a team. I must pay attention to what they are telling me and what they need in order to better help peoples. I can see things they can't, and vice versa. I've learned a great deal about communication and support through a sport. Sport is a great stress reducer. When I'm under pressure, I focus, and get the job done. I love arts, and I try to be a collector, especially for contemporary art; I like to visit museum and gallery and contact artists to better understand their works.

I am interested in a new challenge and an opportunity to use my technical skills and experience in a different capacity than I have in the past. To be honest try new job positions it sounds like an exciting opportunity and an ideal match with my qualifications. My long-term goals involve growing with a "family" where I can continue to learn, take on additional responsibilities, and contribute as much of value as I can.
